Election/Restrictions

Applicant's election without traverse of chains 1-25 in the reply filed on 4-15-2005 is acknowledged.

Claims 26-40 are withdrawn from further consideration pursuant to 37 CFR.

1.142(b) as being drawn to a nonelected claims, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 4-15-2005.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation

Art Unit: 2891

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Otsuki, et al (US 2004/0232467A1)

Otsuki, et al disclose a MIM capacitor(paragraph 105 and Fig. 5). There is disclosed a of polysilicon frist condutive layer 61, a first thin conductive layer made of a barrier 62 and a conductor 63, and over that layer is formed a second conductive layer 65(paragraph 105 and Fig. 5 and paragraph 106). The barrier may be TiN, as Otsuki et al disclose that it is known to use TiN as a barrier (paragraph 0004). The thickness of the barrier is 400 Angstroms (paragraph 65), which satisfies the limitation that the first thin conductive layer comprises a thickness of 450 Angstroms or less. That the barrier layer can comprise TiN satisfies that the first barrier layer comprises Ti, and satisfies the limitation that the conductive layer comprises TiN, as the conductive layer comprises the barrier layer. In addition, the barrier may include a Ti film(paragraph 0004). The metal layer may be aluminum (last line of paragraph 109). Figure 8 shows layer 68 which may be formed as a barrier layer over the conductive layers(paragraph 108). The MIM capacitor also has a layer 64(Fig. 6) which is an insulator layer having high dielectric constant such as BST or Ta2O5 or other high dielectric constant dielectric(paragraph 105). Fig. 8 shows a thin conductive layer 62 a conductive layer 63, a dielectric 64, a

Art Unit: 2891

conductive layer 65 and a conductive layer 68 on the layer 65. Layers 62 and 63 make up the bottom plate and layers 65 and 68 make up the top plate.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Caridad M. Everhart whose telephone number is 571-272-1892. The examiner can normally be reached on Monday through Fridays 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, B. Baumeister can be reached on 571-272-1722. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
